DETAILED ACTION

Sequence compliance

Claims 15-17, 24, 33 and 34 recite nucleotide positions for SEQ ID NO: 8 that do not correspond to any nucleotide positions presented for SEQ ID NO: 8 in the sequence listing.

The restriction requirement of 5/23/2006 is hereby **VACATED** in view of the following restriction requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2-3, 7-8, 12-13 and 19-23, drawn to a method of upregulating isoflavone synthase and chalcone isomerase in a plant; wherein the upregulation occurs by a means other than the introduction of a transgene, classified in class 800, subclass 260 for example.
- II. Claims 2-35, and 46-50 drawn to drawn to a method of upregulating isoflavone synthase and chalcone isomerase in a plant; wherein the upregulation occurs by means of the introduction of a transgene, classified in class 800, subclass 278 for example.
- III. Claims 36-38, drawn to a method of making food, classified in class 426, subclass49 for example.
- IV. Claims 39-45, drawn to a method of making a nutraceutical and inhibiting malignancy in mammalian cells, classified in class 424, subclass 58 for example.

Application/Control Number: 10/659,755

Art Unit: 1638

Claim 1 link(s) inventions I and II. The restriction requirement between the linked inventions is **subject to** the nonallowance of the linking claim(s), claim 1. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking claim, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are the methods of upregulating of Groups I and II that differ from each other in the required materials and method steps in that the method of Group I is drawn to non-transgenic methods and materials while the method of Group II is drawn to transgenic method steps and materials.

Art Unit: 1638

Inventions I-II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are the methods of upregulating of Groups I and II and the method of making food of Group III are unrelated because the methods of Groups I and II comprise different method steps and products than the method of Group III; and the product of Group II i.e. a raw plant is the starting material for the method of Group III.

Inventions I-II and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are the methods of upregulating of Groups I and II and the method of making a nutraceutical and inhibiting malignancy in mammalian cells of Group IV are unrelated because the methods of Groups I and II comprise different method steps and products than the method of Group III; and the product of Group II i.e. a raw plant is the starting material for the method of Group IV.

Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions are the method of making food of Group III and the methods of producing a nutraceutical composition and the method o inhibiting the initiation and promotion of a malignancy in a mammalian cell and of inhibiting the onset of cardiovascular disease of Group IV that differ in their method steps and materials required for practicing the method.

Application/Control Number: 10/659,755

Art Unit: 1638

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, different field of search (see MPEP § 808.02), and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1638

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Russell Kallis whose telephone number is (571) 272-0798. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on (571) 272-0975. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
